

Software Engineering

OVERVIEW

DS2 has experienced engineers and analysts who can work for you starting from the initial requirement analysis process all the way through to the application development and maintenance stages. Our focal point is not only application development but also its collaboration, deployment, management, migration and customization. We use the latest technologies and best practices to develop the best solutions to meet your needs.

DESKTOP SOLUTIONS

Powerful and Flexible

Building custom applications designed for the desktop environment that utilize the latest technologies. Whether developing for .NET or a mixed platform, we have the necessary tools and experience to deliver powerful and quality-driven solutions.

WEB SOLUTIONS

Mobile and Cross-Platform

Designing and building websites and applications that will showcase your company and the services you provide. Leveraging the advantages of the web to provide Rich Internet Applications (RIA) using technologies such as Java, Microsoft Silverlight and HTML 5. We also have years of experience in developing modules and skins for content management systems (CMS), like Dot Net Nuke.

ENTERPRISE SOLUTIONS

Performance, Scalability, and Reliability

Providing business-oriented, end-to-end, solutions to improve your enterprises' productivity, efficiency, and costs. Designed to connect all of your disparate data sources and existing applications to work across your entire enterprise. We have the experience to develop solutions that are performance-driven, scalable, and robust to meet the needs of your enterprise.

MOBILE SOLUTIONS

Information at Your Fingertips

Today, mobile apps are popular with business owners and their customers. Mobile apps can provide a way for your business to connect and generate repeat business, build relationships, and increase accessibility to your customers. DS2 can help design and build your next mobile app that will give you an extra advantage in the marketplace with your customers.

WHY USE DS2?

PURE GENIUS

Highly Technical and Experienced Staff

Our software engineers have a true passion for technology and application development. We pride ourselves on our technical prowess and our ability to deliver solutions that are technically superior and reliable while being efficient and cost effective in delivery. Our staff is experienced, trained, and certified to provide you the best solution no matter what your IT needs are.

A CUSTOMER'S BEST FRIEND

Product Manager

Shouldn't you have an advocate ensuring that the solution being created meets your needs? Typically, once a project's requirements are defined it is developed to meet those requirements void of customer visibility. The issue is that most shops just develop to meet the specification (well... if they use specifications). We champion the use of a customer advocate who ensures that the product is not only what you asked for, but more importantly is what you need. Your customer advocate will have intimate knowledge of your business processes and will ensure that your best interests are kept in mind every step of the way. They help ensure that we can see the forest for the trees.

FLEXIBILITY IS KEY

Agile Processes

Do your priorities ever change? As with any business you have to be flexible and have flexible processes and frameworks. Here at DS2 we use agile processes to ensure that we can quickly change and adapt to your needs. We want to ensure that you get the right product that exceeds your expectations in every way. In order to do so, we can't be bogged down in yesteryear's rigidly fixed practices. To help with this we use SCRUM, an incremental approach to software development that focuses on the customer's needs. Everybody should have a little more flexibility.

LEAVING IT TO CHANCE

Standard Processes

All of our processes are standardized and integrated as a part of our tool belt. Though we remain flexible and continually learn and evolve using the best techniques and processes available. Our standardized workflows help to ensure our processes are repeatable, so that we are successful every time. Don't leave the success of your project to chance.

SUPER PROJECT MANAGERS

PMP Certified

Our project managers are tested, certified, and approved to manage your projects. Providing experienced guidance and direction to ensure your projects are delivered on-time and within budget. Shouldn't every PM be certified? Visit the Project Management Institute to learn more about the benefits of certification.
